**852Core022108.zip**

### Getting Help

To get assistance with Retail Pro v8.52, press the <F1> key to view the Retail Pro Help files.

Documentation is available in PDF format at <http://documentation.retailpro.com>.

## URC Issues Addressed

The following list outlines key issues that have been addressed with this release. This list is not intended to reflect all possible fixes done during the given period, but those that are deemed important for review and specific to this release.

Retail Pro BTF Series			Subtotal: 6
Issue ID	Title	Files to be Released	Solution
<b>Retail Pro v8.52</b>			
16678	ZIP Code Update	Zipcode.dat Zipcode.ix	Updated ZIP Code data files are provided with this release.
16648	Main cannot reverse Shift4 EFT transaction that was completed at a remote	RtiShift4Check.dll RtiShift4Credit.dll RtiShift4Debit.dll RtiShift4Gift.dll	<p>We discovered a limitation in how tokens are used to identify transactions. When using a token to reverse a transaction, the MID must match the original.</p> <p>EFT plugins will now load a file called StoreMID.txt, if it is present in the \EFT\ folder. The file should contain the MID used by each store/station separated by a colon.</p> <p>For example: 0000:12344 000A:12345 001A:12346 002A:12347</p> <p>During authorization, the plugin looks up the store/station in the StoreMID.txt file, and uses the corresponding MID.</p> <p>Individual workstation numbers can also be specified after the store/station:</p> <p>For example: 001A2:12345 001A10:12346 001A:12347</p>

Retail Pro BTF Series			Subtotal: 6
Issue ID	Title	Files to be Released	Solution
16595	Need support for L2 data in RBS	ReceiptRTISchema.xml Rpro8.exe RTI_RP3_CC.dll RTI_RP3_Check.dll RTI_RP3_Debit.dll RTI_RP3_Gift.dll	<p>Three new fields/controls have been added to the credit card tender dialog: Purchase Card, Customer ID, and Tax Exempt.</p> <p>If Purchase Card is not selected, then the Customer ID and Tax Exempt controls are disabled.</p> <p>These fields are now included in the data sent to RBS, along with the tax amount from the receipt.</p>
16566	When consolidating data from multiple 8-Series Mains, SID's are occasionally duplicated.	Rpro8.exe	<p>SIDs are generated using several values, including Store, Station, User ID, Date/Time and a "Random value." It was found that the User ID was not being properly written to the setup files and was generating all SID's from User ID 0 (zero). If two installations created SID's at the same time (within a 10th of a second) and happened to generate the same random value, the same SID would result.</p> <p>The User ID is now properly updated in the setup files, thus properly generating unique SID's.</p> <p><i>Overriding User ID Used for SID Generation:</i> You can configure Retail Pro to override the User ID used for SID generation. This is for situations where multiple installations of Retail Pro are running on a shared key.</p> <p>To override the User ID for SID generation, edit the RproUI.ini file to add the following entry: [SidGen] UserId=####</p> <p>Where #### is the User ID that will be used to generate SID's from this installation.</p>
16487	Discount Type list doesn't respond to the "Enter" key (must be mouse clicked)	Rpro8.exe	<p>The program has been updated to enable users to select/confirm discount types by pressing &lt;Enter&gt;. This applies to selecting a discount type for a line item discount or when spreading global discounts.</p>
16582	New Credit Card Maintenance program to purge or encrypt credit cards.	CcMaint.exe	<p>A new executable, CcMaint.exe, has been added. This tool performs the same functions as CispConv.exe, with additional functionality. The new functionality includes parameters for:</p> <ul style="list-style-type: none"> <li>Setting a mode (clear/encrypt)</li> <li>Setting invoice date ranges.</li> </ul> <p>A complete list of parameters can be viewed by running CcMaint.exe with the /? Parameter.</p>
